## Brief Abstract of the Project proposal

To date, some brands of welding electrodes are produced in the republic, and their quantity covers a very small part of the demand in the country. The number of imported electrodes is far below the level of demand, and the price is high. Entrepreneurs currently import a lot of technology from China. However, there are some problems with the use of these technologies in production, which require the help of specialized scientists. A similar situation occurred with an entrepreneur in Andijan, who was unable to introduce expensive technology from China into production. Ensuring the integration of industrial enterprises and scientists is one of the important tasks in the creation and implementation of modern technologies in production.
